

Drinking Water: Water Quality Report (CCR) - 2012

The Water Quality Report - 2012, also known as the Consumer Confidence Report or CCR, is an annual report that a community drinking water system is required to provide to its customers. The CCR helps people make informed choices about the water they drink.

The CCR lists details of the quality of your drinking water, where it comes from, and where you can get more information.

The Safe Drinking Water Act (SDWA) ensures the quality of Americans' drinking water. Under SDWA, the EPA sets standards for drinking water quality as well as oversees the states, localities, and water suppliers who implement those standards. The EPA sets national health based standards for drinking water to protect against both naturally occurring and man made contaminants that may be found in drinking water.

There are a number of threats to drinking water that you can play and important role in reducing:

- **Improperly disposed chemicals**
- **Improperly disposed prescription medicines**
- **Pet wastes**
- **Pesticides and herbicides**

The Water Quality Report (CCR) - 2012 can be found below. For additional information on the CCR or your drinking water, contact the primary Water Treatment Plant Operator, [proy \[at\] town \[dot\] exeter \[dot\] nh \[dot\] us](mailto:proy@town.exeter.nh.us) (subject: Drinking%20Water%20Questions) (Paul Roy), P.E. (603) 772 - 1346.
